

Scott Peterson's Bad Plant Symbol Translation List

Scott Peterson of the National Plant Data Center in Baton Rouge LA examined every Local Plant table record in every NASIS database that was associated with the official Plant table record whose symbol is “UNKNOWN”. These records represent plants that, when originally converted, had no corresponding record in the official Plant table, based on an attempt to match on the combination of plant symbol and plant scientific name. In many cases, a mismatch occurred due to a slight difference in scientific name. In most cases, Scott was able to suggest an appropriate accepted symbol. In other cases, so little supporting information was provided that Scott was unable to make a guess at what was originally intended.

Please note that we do not currently have accepted symbols available for things like “other annual forbs”, or other anything for that matter. There is a pending proposal to provide symbols for such plant groups. We have a outstanding question into Scott on this issue. We will update this list when we receive plant symbols for these groups.

Local Plant Symbol	Local Plant Name	Local Plant Scientific	Accepted Symbol	Synonym Symbol	Comment
1-Jun	black walnut	Juglans nigra	JUNI		
9999	downy arrowwood	unknown	VIRA		
9999	other trees	unknown			
AABB	other annual forbs	unknown			
AAFF	other annual forbs	unknown			
AAFF#	other annual forbs	unknown			
AAFFx	other forbs (obsolete data)	unknown			
AAGG	annual grasses	unknown			
AAGG	other annual grasses	unknown
